

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

FOREIGN.

ARGENTINA.

Plague—Buenos Aires—1901–1919.

The following statistics of the occurrence of bubonic plague at Buenos Aires, Argentina, during the period 1901–1918, and January to September, 1919, have been recently published by the office of the Asistencia Publica of Buenos Aires:

Year.	Cases.	Deaths.	Year.	Cases.	Deaths.
1901.....	20	2	1911.....	79	12
1902.....	22	2	1912.....	51	8
1903.....	27	3	1913.....	64	2
1904.....	18	1	1914.....	72	6
1905.....	25	4	1915.....	42	3
1906.....	89	21	1916.....	24	3
1907.....	125	21	1917.....	49	4
1908.....	38	1	1918.....	41	11
1909.....	116	7	1919 (Jan. 1 to Sept. 1).....	122	31
1910.....	38	1			

It will be observed that an increase in the number of cases was reported for the period January 1 to September 1, 1919, over the number reported for any complete year since 1901, except the year 1907, and that the number of deaths reported for the same period in the year 1919 was greater than that reported for any complete year since 1900.

BERMUDA.

Epidemic Dengue.

Dengue fever in epidemic form was reported prevalent throughout the colony November 1, 1919.

BRAZIL.

Epidemic Smallpox—Bahia.

The board of health of Bahia reports the occurrence of an outbreak of epidemic smallpox, with a total of 1,203 cases notified from August 1 to October 23, 1919, with 500 deaths; 145 cases were notified in August, 356 in September, and in October 702 cases. Only cases removed for treatment to the isolation hospital have been reported; a large number of cases remained in private homes.

BRITISH WEST INDIES.

Spleen Census, 1918—Trinidad and Tobago.

Council Paper No. 100 of 1919, for the colony of Trinidad and Tobago, British West Indies, entitled "Malaria Report, Spleen Census, 1918," gives the following information:

A spleen census taken throughout the colony of Trinidad and Tobago, beginning September 3 and finished December 4, 1918, in all districts of the colony, shows results as follows:

Number of children examined, 20,590; number of children with enlarged spleens, 2,420; percentage of children with enlarged spleens, 11.8.

The highest percentage of enlarged spleens was obtained in the Mayaro district, viz, 70.2 per cent of 545 children examined, and the lowest in the Port of Spain district, viz, 0.1 per cent of 4,972 children examined.

The result obtained in Arima district appears remarkable, viz, 44.20 per cent in 1918 as compared with 7.9 in 1913-14 and 1.09 in 1914, and is probably explained by unusual malarial outbreaks in that district.

In eight districts there was a distinct increase in the enlarged spleen rate in 1918 as compared with 1913-14. In all the 11 other districts in which the census was taken there was a satisfactory decrease of the rate, and in the whole colony there was a decrease from 17.9 per cent in 1913-14 to 14.1 in 1914 and 11.8 in 1918.

Comparative Results—Mauritius—Ceylon—Trinidad and Tobago.

The table following shows the results of spleen examinations in Mauritius, Ceylon, and Trinidad and Tobago:

Colony.	Date of census.	Number of children examined.	Number of enlarged spleens.	Percentage of enlarged spleens.
Mauritius.....	1907-08..	31,022	10,595	34.2
Ceylon.....	1908.....	92,258	31,421	34.1
Trinidad and Tobago.....	1913-14..	17,495	3,134	17.9
Do.....	1914.....	25,927	3,658	14.1
Do.....	1918.....	20,590	2,420	11.8

CANADA.

Smallpox—Province of Ontario.

An officer of the Public Health Service visited Toronto, Ontario, Canada, November 17, 1919, for the purpose of securing information relative to the outbreak of smallpox. He reports that 368 cases of smallpox and 204 cases of chicken pox were reported in Toronto from November 1 to 15. During the same period 178 cases of small-

pox were reported from other places in the Province of Ontario, including Hospital Orillia, 35 cases; Stratford, 19; Woodstock, 11; Stouffville, 10; Dunwich, 10; and Kriegerdorf, 9 cases.

From January 1 to October 31, 1919, 8 cases of smallpox and 912 cases of chicken pox were reported in Toronto. The smallpox is very mild in form, and the health officer of Toronto is of the opinion that many cases of this disease have been diagnosed as chicken pox.

On October 17 the number of cases reported in the city of Toronto was said to be decreasing.

CUBA.

Communicable Diseases—Habana—Oct. 21–31, 1919.

Communicable diseases were notified at Habana from October 21 to 31, 1919, as follows:

Disease.	New cases.	Deaths.	Remain- ing under treatment Oct. 31, 1919.	Disease.	New cases.	Deaths.	Remain- ing under treatment Oct. 31, 1919.
Bronchopneumonia.....		2		Measles.....	15		10

GREAT BRITAIN.

Plague Rats on Vessel—Liverpool.

The finding of plague-infected rats on the steamship *Musician*, which arrived October 24, 1919, at Liverpool from South American ports, has been reported. The *Musician* left Pernambuco, Brazil, September 5, 1919.

GREECE.

Sanitary Stations—Macedonia.

The ministry of public assistance has decided to open sanitary stations in eastern Macedonia for combating epidemic conditions, particularly as regards malaria.

INDIA.

Anthrax—Madras Presidency.

During the month of July, 1919, 269 fatal cases of anthrax in stock were reported in the Madras Presidency, India, by the Civil Veterinary Department.

MEXICO.**Dengue—Vera Cruz.**

Dengue fever was reported present with many cases at Vera Cruz, Mexico, November 1, 1919.

PLAGUE ON VESSEL.**Steamship "Nankin" at Port Said.**

The steamship *Nankin* from London via Marseille arrived at Port Said, Egypt, with nine cases of plague on board occurring among the crew from July 10 to the date of arrival at Port Said. On July 13 two additional cases were removed from the vessel and to July 17, 1919, a total of 17 cases was reported landed from the *Nankin* at Port Said.

The *Nankin* left London June 26, Marseille July 6, and Malta July 8, 1919. The finding of six dead rats during the voyage was reported by the ship's surgeon. At Marseille the *Nankin* took on mail from Rotterdam and merchandise, and the ship's officer who had charge of the loading stated that a great number of fleas were observed on the bags containing the mail and merchandise. On July 10 a cat on board was found to be sick with a cervical bubo and a kitten was found with inguinal plague. On the same date a Lascar member of the crew was taken ill but without buboes, and on July 11 three other Lascars were attacked but exhibited no buboes. On July 12 a Lascar was taken ill with buboes present and buboes developed in the four cases previously reported.

The history of the *Nankin* shows that the vessel left Bombay May 3, 1919, stopping at Aden, where two suspect cases of plague were landed. On reaching Suez the vessel received telegraphic report that the cases landed at Aden had been declared negative. The *Nankin* arrived at London May 29, remaining there until June 26, leaving the Thames June 27, 1919.

SPAIN.**Plague—Barcelona.**

The occurrence of five cases of plague at Barcelona during September was reported October 6, 1919. The cases occurred among laborers employed in a warehouse.
